Diabetes dataset

Objective: To perform EDA and Classification task on the given dataset

Algorithms Used: Grid Search -SVM
                    K Nearest Neighbour

Accuracy Achieved: Grid Search -SVM: 82%
                      K Nearest Neighbours: 80%

The accuracy achieved is not that great, but it can be improved by feature scaling and model boosting.
